Perform[®] flexible covering - the perfect replacement for lead

-  No scrap value to potential thieves
-  Lightweight and easy to handle
-  Great form stability, easily cut and dressed
-  Available in 4 colours
-  Use full roll without need for expansion joints

Perform[®] is a composite consisting of aluminium mesh, embedded in a special type of polymer rubber. Both of these materials are environmentally sound and UV resistant. The material offers the same functionality of lead, has excellent stretching properties and provides a 'breathable' covering which prevents the formation of condensation.

Much lighter than lead and non-toxic, Perform[®] meets all the demands of today's health and safety regulations.

In order to match various different coloured tiles or slates, specifiers can now choose from four different colours; grey, terracotta and black are available from stock with brown to special order.

1 Exterior Walls

Perfect for flashing all types of structures including car ports, conservatories and extensions.

2 Dormers

Perform® is the ideal solution for flashing dormer windows and any other penetrations through traditional roofs.

3 Chimneys

Great for flashing around traditional chimney stacks on any type of profiled tile or slate roof.

4 Valley Gutters

Ideal for valley or box gutters, the full 4 metre roll of Perform® can be used without the need of expansion joints.

5 Solar Panels and Skylights

Perform® is the ideal solution for flashing solar panel fixings and around roof lights.

Perform® flexible covering Installation Instructions

1. Perform® can be applied in exactly the same way as lead, but causes no unsightly staining negating the need for patination oil. It is easily cut with tin snips or a trade knife.
2. When the material is dressed during application a Perform® dresser should be used for best results and to avoid damage to the surface of the product.
3. Perform® can be joined by either using the lock seam method or by using Perform® adhesive. In applications where lead would be traditionally welded, Perform® adhesive should be used.
4. The product will adhere to brick, concrete, metal and glass, on very porous surfaces it is recommended to treat the area with a proprietary PVA Primer.
5. If painting is required or where water is likely to travel from copper or bitumen onto Perform® use a 100% acrylic low sheen exterior paint.

Stretching ability

You can either fold up joints . . .

- glue them together with an overlap of 30mm as a minimum.

Use the dresser to protect Perform

Perform adhesive in 290ml tubes
