

## KwikFlash

Lead free

Flexible

Butyl backed

Polymer rubber

Roof flashing

### Easy to Install

Light weight, easy to cut and fully self-adhesive

### High resistance to UV

### Flexible and very workable

Malleable and stretchable. Dresses well to all profiles

### Product Range

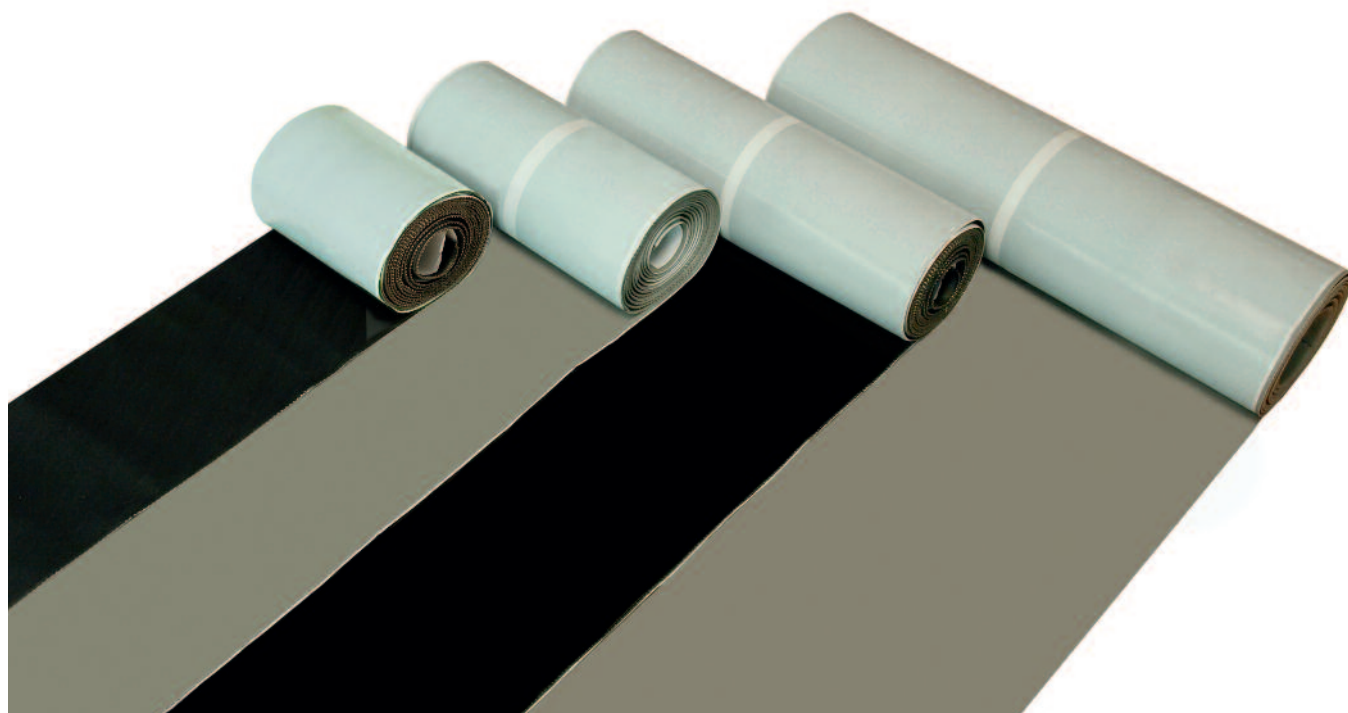

Four standard widths in Black & Grey

### Environmentally Friendly

Aluminium stretch mesh encapsulated into polymer rubber

# KwikFlash - Self-adhesive flashing for any roof project

## KwikFlash

KwikFlash is a self adhesive, stretchable aluminium mesh encapsulated into a polymer rubber. Both of these materials are environmentally friendly and UV resistant.

The butyl backed KwikFlash will adhere to most substrates including brick, tile, slate, glass and most metals. KwikFlash can be cut with tin snips, scissors or a craft knife.

When applying KwikFlash, the protective film should be removed from the butyl backing. The adhesive strength will be most effective when applied at a temperature over 5°C. In order to increase the adhesive strength you can heat the butyl with a hot air gun.

When joining lengths, an overlap of at least 30mm should be applied. No allowance needs to be made for expansion

## KwikFlash selection guide and price list

Product Code	Description	Carton kg.	List Price
KFR5-200G	KwikFlash 200mm x 5m Roll - Grey	3.3kg	£72.00
